"Recycled Apparel (two-for-one strategy)"

Sector: Textile, Fashion & garment

Pre-Incubated Since: 2022

Current Stage: Product ready; at market entry level. Graduated from pre-incubation program and entering Incubation phase.

The Challenge: New clothes may look great at first but one troubling issue about them is the amount of waste that they create in the end. Lot of this is not biodegradable. When these clothes are thrown away, they can cause a lot of problem to the environment by creating

pollution and landfill spaces.

The Innovation: The startup has developed an ecologically responsible, recyclable, cost-effective sustainable apparel with the intention of giving back to the community using a novel model two-for-one strategy. They are currently producing plain t-shirts and designer t-shirts.
