

MEGHAS BEVERAGES

"Air to Water - Affordable Alkaline water"

www.meghasbeverages.com

Sector: Food & Beverages

Incubated Since: 2022

Current Stage: The Company has started its production and is ready to enter the market.

The Challenge: Currently consumed water is low in pH and harmful to health. Also inorganic chemicals are used to increase the pH of the water to meet the BIS norms. Alkaline water in the market are produced either by electrolysis or ionization process where there is more than 50% of water wastage and water produced cannot be stored for more than one month.

The Innovation: Affordable water produced from Air and a novel mineralization method to make water with pH 8+. No usage of natural resources & no wastage of water.
